about ARABCO

ARABCO INTERNATIONAL GROUP

Arabco was started with a vision to achieve professional preeminence. In achieving professional preeminence, we have adapted to the trends of the industry in a manner to foster change, ensuring growth for all our stakeholders. The quality of what we deliver is insurmountable and we take pride in having the best available professionals with diversified background. Our employees are our true strength and we remain steadfast in providing them ample opportunity to grow and flourish.

ARABCO has embarked on a journey of continuous improvement by developing unparalleled competencies to achieve preminent growth in the market. We will provide an efficient, cost effective & reliable business solutions. ARABCO is truly aware of the environmental responsibilities and helps the businesses to recognize energy & environmental challenges and turn them into opportunities by helpin them adopt sustainable practices that lead to long term financial viability

our vision

To be the premiere single-source and total solution provider for the Oil and Petrochemical Industry in the region most admired for its people, partnership and performance.

our mission

Our mission is to deliver exceptional service and value to our international and domestic clients for their oil field, petrochemical, and water treatment needs. To be the preferred partner to our Clients, we take a genuine interest in them, anticipate their needs, and act to add maximum value to their business. As a team, we strive to achieve growth and fair return for our investors through maintaining a good and close relationship with our suppliers, providing a dynamic and challenging environment for our employees and exceeding the expectations of our clients while conserving resources and preserving the quality of the environment.

We Cater to

- Oil & Gas
- Glass Production
- Paints & Pigments
- Ceramic Industry
- Admixtures
- Construction

Our Strength

Our strength lies in the value it creates for its clients. Our expertise in improvising within the given resources enables it to meet client's requirements through drastic costs cuttings & meeting stringent deadlines.

Stimulation

On completion and over time, downhole well conditions can deteriorate, inhibiting oil and gas production. Our team of R&D chemists focusses on developing products with reduced environmental impact, increased safe handling properties and superior performance. We understand that having the right additives, available promptly, are key challenges of running successful acid stimulation jobs.

- Acid Corrosion Inhibitors And Intensifiers
- Self Diverted Acid Additives
- Iron Control Agents
- Iron Control Agents
- Specialized Solvent Systems

Cementing

The product is a kind of organic polymer-based retarder. It is mainly used in a deepwater cement slurry system. It can effectively prolong the thickening time of cement slurry with a good regularity and have no influence on other properties of the slurry so as to insure that cementing proceed safely and smoothly. It can be used with water only. It has no special request for the quality of mixing water. No sensitive to dosage, no catastrophe point. AEC-6 can stick on the surfaces of cement hydrate to inhibit contacting between cement and water, also stick on the surfaces of crystal nucleons to prevent their enlarging. So it can retard hydrating of cement slurry.

- Retarder
- Cenosphere
- Hollow Glass Microsphere
- Fluid Loss Additives
- Dispersants
- Antifoam/Deafomer
- Anti-Gas Migration
- Spacers And Chemical Wash
- Anti-Gas Migration
- Cement Extenders
- Weightung Agents
- Sillica To Prevent Strength Retrogression

Drilling Fluids

Fluid chemicals are used to aid the drilling of boreholes into the earth, widely adopted in drilling fluids, completion fluids and drilling mud with a variety of treatment agent while drilling oil and natural used to aid the drilling of boreholes.

- Weighting Agents
- Antifoam/Defoamers
- Deflocculants

Water Treatment Chemicals

Higher vitality cost, diminished effectiveness, costly tedious incessant fixes and substitution of gear are altogether aftereffects of scale collection and forceful assaults by cooling water, in the event that it is left inadequately treated for erosion control, consumption, scaling, fouling are the serious issues in cooling water frameworks that can harm the whole framework.

The essential target of cooling water treatment is to keep up a superior warmth move effectiveness of cooling framework conferring assurance to the entire plant from erosion and decimation. This consumption issue turns out to be so serious particularly when neighborhood water is utilized for cooling framework because of the incredibly assaulting nature of nearby water. Developing an appropriate water treatment framework especially reasonable for Gulf water is finished through the joint work of Kuwait Institute for Scientific Research and AFKARI CHEMICALS KUWAIT, so as to serve the clients around, in a generally logical and practical way. A broad research and field-tested by a group of research laborers brought about the improvement of these scope of items.

The correct answer for a basic issue of consumption control.

- Sodium Metabisulfite
- Sodium Hydroxide
- Citric Acid
- Disodium Phosphate
- Antiscalant
- A-Polymer
- C- Polymer
- EDTA
- Ferric Chloride
- Nitric Acid
- Liquid Ammonia
- Acetic Acid
- Polyaluminium
- Chloride
- Aluminium Sulphate
- Activated Carbon
- Hydrated Lime

Commodity Chemicals

Commodity chemicals (or bulk commodities or bulk chemicals) are a group of chemicals that are made on a very large scale to satisfy global markets. The average prices of commodity chemicals are regularly published in the chemical trade magazines and web sites such as Chemical Week and ICIS.

- Sodium Metabisulfite
- Sodium Hydroxide
- Citric Acid
- Disodium Phosphate
- Antiscalant
- A-Polymer
- C-Polymer
- Edta
- Ferric Chloride
- Nitric Acid
- Liquid Ammonia
- Acetic Acid
- Polyaluminium
- Chloride
- Aluminium Sulphate
- Activated Carbon
- Hydrated Lime

Warehouse Facility

Fully shaded warehouse provides ample space to store chemicals, electrical and mechanical items to ensure that regular and sustainable stock is always available for our customers to perform their routine operations without any lapse.

Complimented with inventory management system and timely reporting, we offers all-inclusive services to the clients.

Smart Procurement

Fully shaded warehouse provides ample space to store chemicals, electrical and mechanical items to ensure that regular and sustainable stock is always available for our customers to perform their routine operations without any lapse. Complimented with inventory management system and timely reporting, we offers all-inclusive services to the clients
